Challenges

Successful patient recruitment is one of the greatest challenges in clinical trials. Delayed or inefficient patient identification, inadequate pre-screening examinations, and insufficient communication with potential participants can delay the entire study process too often, increase costs, and compromise data quality. These challenges highlight the need for innovative strategies and solutions.

- **First Patient In, Last Patient Out**
Delays in recruitment can shift the entire study timeline.
- **Time to Enrollment Goal**
The longer it takes to reach the enrollment target, the more expensive the trial becomes.
- **Cost per Enrollment**
Inefficient patient recruitment processes increase the cost per enrolled participant.
- **Retention Rate**
Drops-out after screening lead to additional effort, higher costs, and delays in the study.

Why us

- ✓ Improved patient access
- ✓ More reliability in planning
- ✓ Fewer screening failures
- ✓ Better adherence to timelines
- ✓ Efficient resource utilization
- ✓ Shorter time-to-market

We take care

Camovis offers a customized service for accelerated patient recruitment. This includes the targeted identification and pre-selection of suitable study participants supported by precise communication and efficient follow-up.

Our research professionals support trial centers directly on- and off-site and collaborating with the study team to relieve them of the time-consuming task of patient recruitment. With database analysis and thorough targeted identification and pre-selection of potential study participants, we optimize the recruitment process and shorten enrollment time. In addition to direct patient identification, we offer comprehensive support to improve the entire recruitment chain – from initial contact with potential patients to structured patient support through enrollment. We improve your patient retention and increase study enrollment.

Service Packages

Patient Identification – Find suitable candidates for your clinical trial

- Patient file reviews in paper and digital archives and hospital documentation
- Research in patient registries and study databases
- Identification of in-hospital patients in relevant specialist wards
- Screening of patients in outpatient clinics and study centers

Pre-Screening – Preselect suitable study participants

- Identification of candidates according to inclusion and exclusion criteria
- Contact calls by phone to provide initial information about the trial
- Structured on- and offsite prescreening interviews based on study-specific criteria
- Documentation and referral of potential patients to the study team

Patient Supervision – Support, track and follow-up

- On site patient supervision in hospitals, practices and outpatient departments
- Continuous support of patients up to final study inclusion
- Documentation and monitoring of the recruitment activities
- Thorough reporting and documentation on non-inclusion, drop-out rates and delays

Decentralized Trials (DCT) - Patient Recruitment

- Camovis Patient Recruitment Services support the decentralized conduct of clinical trials
