

# PROJECT TRAINING

**Your customized team preparation with full project focus**

## Challenges

Initiation visits and GCP training are a standard part of every clinical trial. Nevertheless, there are significant differences in qualification and preparedness among study sites in practical aspects of trial implementation and execution. Large parts of study teams and their practical needs are not addressed in established training programs. As a result, varying qualification levels of site personnel repeatedly lead to uneven and inconsistent protocol execution.

- **Uniform training levels**

Different training levels of study personnel at the trial sites lead to operational inconsistencies.

- **Harmonized trial workflows**

Different interpretations of trial procedures cause deviations, higher query rates and delays of the study timelines.

- **Clear focus on execution**

Recurring unresolved practical issues burden study site teams, monitors and slow down the study progress.

- **Transparent roles and responsibilities**

Unclear responsibilities and lack of coordination cause inefficiency, create misunderstandings and duplicate work.

## Why us

- ✓ Project centric approach
- ✓ Accelerated team readiness
- ✓ Proactive issue spotting
- ✓ Direct access to experts
- ✓ On- & off-site available
- ✓ Enhanced study quality

## We take care

The Camovis Project Training Service is a tailor-made service for on-site study teams. The trainings specifically prepare study nurses and coordinators for the practical implementation of the study protocol – study-specific, hands-on, and aligned with the latest standards. The goal is to ensure harmonized, protocol-compliant execution of clinical trials across all sites at the very start.

At study initiation, we conduct focused kick-off meetings with site teams, emphasizing workflows, common pitfalls, and practical implementation on-site. Afterwards, we support the teams with Q&A sessions, a project-specific hotline, and flexible assistance throughout the entire study – available 24/7 if required.

Hands-on training and immediate problem-solving support help identify and eliminate potential sources of error at an early stage. This streamlines study processes and safeguards quality. Reduced error rates ease the burden on sponsors and CROs, ensuring timely project delivery.

# PROJECT TRAINING

**Your customized team preparation with full project focus**

## Service Packages

### Study Kick-off

- Operational preparation for study start
- Tailored kick-off meetings for the study team
- Focus on practical implementation and common pitfalls
- Aligned information standards at the study site

### Continuous assistance

- Practice-oriented support of study workflows
- Guidance on protocol specific requirements
- Hands-on training for Lab kits, documentation & eCRF entries
- Efficient query management to reduce errors

### Expert hotline & support

- Project-specific hotline (Email & Phone)
- Flexible support – 24/7 on request
- Direct access to experts for urgent questions
- Proactive support with regular status checks

### Decentralized Trials (DCT) - Project Training

- Camovis Project Training Services support the decentralized conduct of clinical trials
